

# TAH

## HYGIENIC RECTANGULAR SILENCER

### Characteristics:

TAH are hygienic rectangular silencers equipped with baffles that attenuate sound transferred by ducts in ventilation systems.

### Intended use

The TAH silencers are designed for attenuating noise transferred by rectangular ducts in ventilation systems. They are usually located between fans and intake or extraction ducts as well as before intake ventilators which supply air to rooms requiring high acoustic comfort. The TAH silencers are installed in ventilation ducts that require high cleanliness. The silencer design facilitates baffle disassembly for periodic cleaning.

### Design

The silencer housing is made of galvanised sheet. Inside the housing, there are galvanised sheet baffles and a sound attenuating insert made of a non-flammable sound absorbing material (Class A1 according to PN-EN 13501-1). The surface of the sound attenuating insert is additionally covered with abrasion-resistant glass fibre tissue. As standard, the TAH silencers are fitted with 20, 30 or 40 mm wide flange connection (depending of the silencer cross-section). The silencers can be ordered in custom sizes. In such a case they are marked as TAHS. All TAH and TAHS silencers are equipped with an access panel that facilitates baffle disassembly. The access panel can be located on side A or B. This should be specified when ordering. In a stainless version, the steel elements mentioned above are made of 1.4301 stainless steel (according to EN 10088).

### TAH silencer versions

**TAH...-AA** – a silencer with absorptive baffles covered with glass fibre tissue. It is particularly recommended for attenuating medium- and high-frequency sound.

**TAH...-AR** – a silencer with absorption-resonator baffles covered with glass fibre tissue and with 50% of its surface covered with galvanised sheet. It is particularly recommended for attenuating low- and medium-frequency sound.

### Application

The tightness of the TAH silencer housing is normally classed as A (according to EN 1507), which allows for using these silencers in ventilation systems with pressure ranging from -500 to 500 Pa. The recommended airflow speed for TAH silencers is up to 12 m/s.

### Baffle and silencer cleaning

Cleaning of the baffles and the inside of the silencer housing should be conducted in dry conditions, by means of compressed air or a cloth/sponge with a little water with low-foam surfactants. Do not clean the baffles with corrosive detergents or a water jet. Excessive humidity of the baffles can result in their irreversible damage and the loss of acoustic properties.

### Installation

As standard, the TAH/TAHS silencers can be installed inside buildings in both horizontal and vertical ventilation ducts, with baffles set vertically or horizontally. The silencers are installed by means of lifting slings.

### Dimensions

The TAH silencers can be delivered with the following dimensions:

- width A = 150–3,000 mm
- height B = 150–2,500 mm
- length L = 500–2,000 mm
- baffle thickness GR = 100, 200 mm
- distance between baffles:
  - SZ = 50–100 mm (for baffles GR = 100 mm)
  - SZ = 50–200 mm (for baffles GR = 200 mm)

The following pages of the specification sheet include standard silencer dimensions.

# TAH – Hygienic Rectangular Silencer

When ordering, please provide information according to the following pattern:

(standard silencer)

**TAH <X> – <TK> – <A> x <B> x <L> – <PP> – <P>**

(custom silencer)

**TAHS – <TK> – <A> x <B> x <L> – (<GR> x <SZ>) x <IK> – <PP> – <P>**

Where:

**X** silencer type\*

- 11** – baffle thickness 100 mm, 100 mm distance between baffles
- 15 – baffle thickness 100 mm, 50 mm distance between baffles
- 21 – baffle thickness 200 mm, 100 mm distance between baffles
- 215 – baffle thickness 200 mm, 150 mm distance between baffles
- 22 – baffle thickness 200 mm, 200 mm distance between baffles

**TK** baffle type\*

**AA** – absorptive baffles without a deflector

**AR** – absorption-resonator baffles without a deflector

**A** silencer inner clearance width in mm

**B** silencer inner clearance height in mm

**L** silencer length in mm

**GR** baffle thickness in mm

**SZ** distance between baffles in mm\*

**IK** number of baffles

**PP** cover position\*

**X** – cover on the side parallel to baffles

**Y** – cover on the side perpendicular to baffles

**P** material\*

**SO** – galvanised steel

**SN** – stainless steel

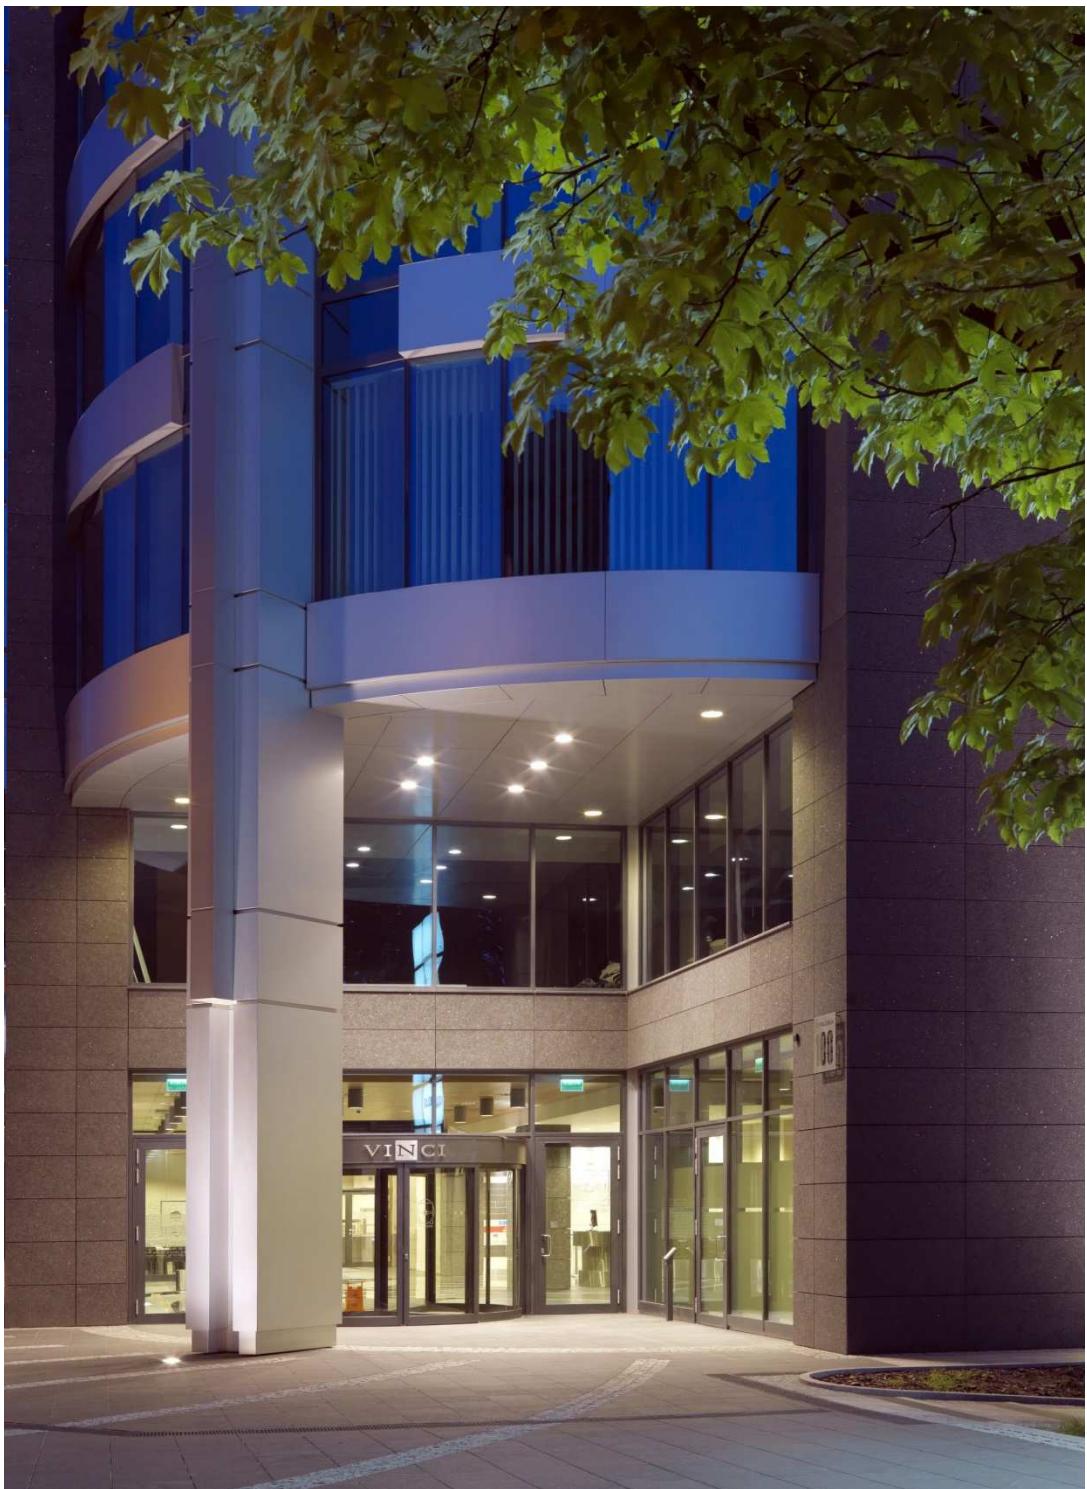

\* optional values – if not specified, default values will be used

Order example:

**TAH22 – AA – 1,200x1,000x1,000 – X (standard silencer)**

**TAHS – AR – 1,150x1,000x1,000 – (200x87)x4 – Y (custom silencer)**
