

NAF

Diffusers with absolute filter H13 class

SMAY™

Description:

A rectangular steel or aluminium diffuser with movable or fixed vanes, equipped with a plenum box and an absolute filter H13 class.

Intended use

NAF diffusers are used in facilities with increased air quality requirements, for example, hospitals, laboratories (to keep the purity of tested samples and limit the escape of harmful pollutants), the food industry, pharmaceutical facilities and assembly rooms for microelectronics. H13 class particulate filters provide a very high degree of air supply purity.

Design

Supply diffuser

Plenum boxes are equipped with diffusers for the following ceiling mountings: SDA4, ALDA4, NS4, NS5, NS8 and NS9 or with grilles for wall mounting of the ST and AL type series. The diffusers are powder-coated in white, RAL9010, as standard. They can also be coated in another RAL colour on request.

Plenum box

NAF diffusers are equipped with a plenum box with a side or top circular connection pipe with a damper. The damper is manufactured in two versions: suitable for inside the box with a lever and suitable for outside the box next to the connection pipe. The standard plenum box is made of galvanised steel painted in the colour RAL 9010. It can be made of stainless steel on request. In standard versions, there are stubs for connecting a differential pressure switch, installed in the plenum box casing. The box is equipped with a connection pipe for the filter integrity control (carrying out tracer-gas leak tests) as standard. The structure of the box allows for the use of test methods in accordance with ISO 14644: Cleanrooms and Associated Controlled Environments – Part 3: Test methods

Structure

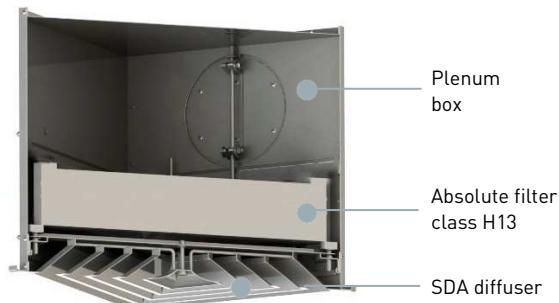

Figure 1. The structure of NAF diffuser with SDA ceiling diffuser.

Air filter

The filter is seated within the housing on a special aluminium frame and mounted with a 4 mm hex wrench using the corners with grub screws that are delivered loose. The air filter is manufactured to class H13 in accordance with PN EN 1822: 2009 in a housing made of galvanised sheet metal. Verification of the degree of contamination of the air filter is possible using a differential pressure switch connected to the stubs mounted in the box casing. It is recommended that the differential pressure switch is used for the optimum operation of the diffuser.

Design guidelines

For proper operation of the diffuser, the recommended airflow velocity through a class H13 150 mm filter should not exceed 0.75 m/s and for the 292 mm filter – 1.5 m/s. Final flow resistance: 500 Pa. Maximum working temperature: 70°C. It is recommended that the air filters are replaced when the pressure drop measured at the filter in use exceeds twice the value of the pressure drop stated for a new filter.

Dimensions

Box with Pd damper

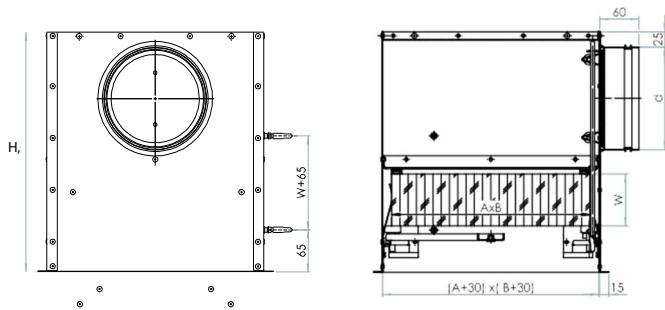

Figure 2. Dimensions of the box with the side connection pipe and Pd damper adjusted from the inside.

Box with Pg damper

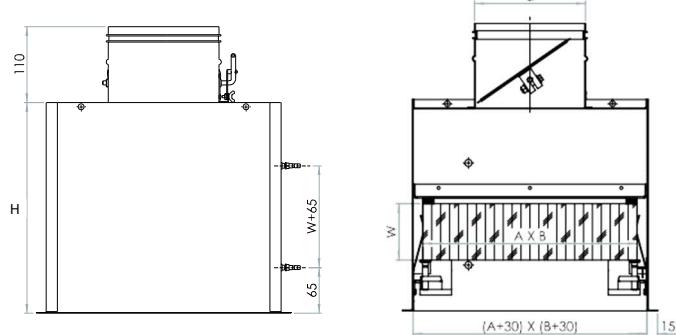

Figure 3. Dimensions of the box with the top connection pipe and Pg damper adjusted in the connection pipe.

Table 1. Version of the NAF box with the side connection pipe and Pd damper adjusted from the inside.

Filter dimensions		H13 filter capacity	Initial flow resistance for H13 filter	Connection pipe	Box height	Weight with a filter
A x B [mm]	W [mm]	V [m³/h]	Δp [Pa] +/- 10%	Ød [mm]	H ₁ [mm]	m [kg]
305 x 305	78/80	250	250	158	370	11.5
	150	250	250	158	440	12
	292	500	255	198	620	16
305 x 610	78/80	500	240	198	410	18
	150	500	240	198	480	19
	292	1000	250	248	670	24
405 x 405	78/80	440	235	198	410	15.5
	150	440	235	198	480	17
440 x 540	78/80	650	225	248	460	19
	150	650	225	248	530	21.5
457 x 457	78/80	560	230	248	460	19
	150	560	230	248	530	21.5
535 x 535	78/80	770	225	248	460	21.5
	150	770	225	248	530	23.5
575 x 575	78/80	890	220	248	460	23
	150	890	220	248	530	25
610 x 610	78/80	1000	220	248	460	25
	150	1000	220	248	530	27

In a standard 600 x 600 mm ceiling module, you cannot use the NAF diffuser with an A x B filter dimension greater than 535 x 535 mm.

Table 2. Version of the NAF box with the top connection pipe and Pg damper adjusted on the connection pipe.

Filter dimensions		H13 filter capacity	Initial flow resistance for H13 filter	Connection pipe	Box height	Weight with a filter

Installation

There are four Ø8 holes in the NAF box for installation by means of slings. If the filter is square-shaped ($A = B$), the diffuser is mounted to the plenum box by means of the central screw and for the rectangular-shaped filter ($A \neq B$), to the mounting bracket in the box with screws passed through the holes in the diffuser frame.

NAF – Diffusers with absolute filter H13 class

When ordering, please provide information in accordance with the following pattern:

NAF - <A> x x <W> - <d> <R> - <P> <RAL> / <ADD>

Where:

A Air filter width in mm selected from the table above

B Air filter length in mm selected from the table above

W Air filter thickness in mm selected from the table above

d Connection pipe diameter in mm

R Damper in a connection pipe:

Pb – Damper in the side connection pipe adjusted on the connection pipe

Pd – Damper in the side connection pipe adjusted with a lever from inside the box

Pg – Damper in the top connection pipe adjusted on the connection pipe

P Finish*

SL – coated steel

SN – Stainless steel, grade 1.4301 (304 according to AISI, 0H18N9 according to PN)

RAL Finish*

ADD Specify additional accessories here, as below: **

Accessories

H13 A x B x W absolute filter (delivered separately in a cardboard packaging made of five layers of damage-resistant corrugated board and PE foil)

NS4 Swirl ceiling diffuser with fixed vane

NS5 Swirl ceiling diffuser with fixed vanes

NS8 Swirl ceiling diffuser with movable vanes

NS9 Swirl ceiling diffuser with movable vanes

SDA4 Four-way square/rectangular ceiling diffuser, steel

ALDA4 Four-way square/rectangular ceiling diffuser, aluminium

* Optional values – if not specified, default values will be used

** For square diffusers: installation on the central bolt (K1) only, for rectangular diffusers: installation with screws (K8) only

1. It is possible to equip a NAF diffuser with accessories for wall mounting with the ST and AL type series ventilation grilles; when ordering, please specify the grille type precisely using the order code provided in the datasheet for the respective grille.
2. It is possible to equip a NAF diffuser with an E11 or H14 class air filter. When ordering provide the required filter class.

Example product labelling: **NAF-305x305x150-158Pb-**SL9010/H13, SDA4****
